

Appendix: Supplemental Evidence and Exhibits

EXHIBIT A – Suspicious SMS-Email Gateway Activity

Sender: LITTLEBADBOY@vtext.com

Date: December 28, 2024

Subject: "Hey I got that computer"

Details:

- Email originated from Verizon SMS Gateway (vtext.com).
- Sent to adrianmartinezconol@gmail.com.
- This message appears to be an unsolicited or taunting notification implying physical possession of a computer.
- Timeline aligns with SIM hijack incident window.
- Potentially connected to identity misuse or surveillance.

EXHIBIT B – Google Account Archive Request

Sender: Google <no-reply@accounts.google.com>

Date: January 2, 2025

Subject: Archive of Google data requested

Details:

- Google confirms a data archive (Google Takeout) request was made on Adrian MC's account.
- If unauthorized, this represents a direct compromise of personal cloud data.
- Message was fully authenticated by Google (SPF, DKIM, DMARC all pass).
- Highly likely that credentials were accessed post-SIM breach or via credential stuffing.

ANALYSIS:

These two emails represent distinct but correlated threat vectors:

1. The SMS gateway message reflects potential psychological manipulation or surveillance pattern ("I got that computer").
2. The Google alert confirms active data exfiltration.

Together, these support the narrative of a recursive identity breach extending beyond the mobile SIM and into cloud and d

RECOMMENDATION:

- Include in any legal packet, police filing, or digital rights case.
- Revoke Google sessions immediately.
- Pursue a data request log from Google under privacy rights (see: <https://support.google.com/policies/troubleshooter/2990>)
